SINCE 1922

Please join us for our 2016 Sunbelt Field Day

Get a firsthand look at how the crops you grow
are performing in real farm conditions.

The 2016 Sunbelt Expo Field Day is a can't-miss event in southeastern agriculture.

We look forward to hosting you at the annual Sunbelt Ag Expo Field Day on Thursday, July 14, 2016.

Guests can see demonstration plots, which

contain the latest cutting edge research, and visit with industry and university researchers to get up-to-date information on topics such as new seed varieties, irrigation, crop protection, soil fertility, forages and precision agriculture.

Come and get a sneak

preview of what you will see at the 39th annual show October 18-20.

We work with our industry and university partners to conduct agronomic research that addresses real life challenges that farmers face on a daily basis.

All of our research is done in collaboration with farmers, industry and universities in order to determine the best approach — economically, environmentally and socially — for the challenges that confront Southeast farm-

ers. Anyone attending our field day will take away useful information on a variety of topics that they can apply to their operation back home and improve their bottom line.

Field Day is free and open to those involved in agriculture and agribusiness. Registration begins at 7:15 a.m., followed by a complimentary biscuit breakfast, exhibit viewing and welcome from Georgia Department of Agriculture and Georgia Farm Bureau.

You'll have a chance to win some great door prizes, as well as receive a free Expo cap. The trams will depart for the field tour at 8:00 a.m. sharp and return by 12 noon. A BBQ sandwich lunch will be provided by Ameris Bank.

Come see us on July 14 as we highlight the latest agronomic research at the 2016 Sunbelt Ag Expo Field Day.

Sincerely,

Chip Blalod
Executive Director
Sunbelt Agricultural Exposition

SCHEDULE OF EVENTS

AGRICULTURE BUILDING #1

- 7:15 a.m..... Biscuit breakfast, door prize registration, static exhibits
- 8:00 a.m..... Trams depart for field tours
- 12 noon..... Trams return. BBQ lunch sponsored by Ameris Bank.
Grand prize and door prize giveaways.

GRAND PRIZES:

**Brown Rotary Mower 416, Shotgun,
Titan/Goodyear Tires, Komet End Gun for Pivot,
Trimble Monitor and Control System**

*Grand prize and door prize winners will be posted at the conclusion of field tours.
Every attendee will receive a Sunbelt Ag Expo cap.*

You're invited to join us for Biscuit Breakfast at Expo Field Day

For the fifth year, the Georgia Department of Agriculture and Georgia Farm Bureau will be hosting a complimentary Biscuit and Coffee Breakfast in Agribusiness Building #1. Serving will begin at 7:15 a.m. A variety of static exhibits as well as door prize registration can also be found in this building.

Representatives from both groups will bring short remarks before trams depart for field tours at 8:00 a.m. sharp.

MORE RIGHT THAN RAIN

Education, efficient crop management are key goals of Sunbelt Expo Field Day

By BRAD HAIRE
Farm Press Editorial Staff
brad.haire@penton.com

The farm economy is as volatile now as ever, with neither time nor money to waste on unnecessary inputs. In these challenging times, Sunbelt Ag Expo continues its mission to be a premier location for on-farm research and a place that yields information farmers can use to produce their crops more efficiently.

Sunbelt Agricultural Expo Field Day is about the South's top row crops; it's the best time and place to see the latest crop technologies, products, and research in real world farm conditions. And it all can be seen in just half a day.

This year's Ag Field Day is July 14 at the Darrell Williams Research Farm, located at the Expo show site at Spence Field, Moultrie, Ga.

Registration is free for anyone who works in agriculture, and the day starts at 7:15 a.m. with breakfast, followed by quick welcomes and comments from the Georgia Department of Agriculture and Georgia Farm Bureau.

LOAD 'EM UP

Shuttles will be loaded at 8 a.m. to tour the farm. There are 30 stops scheduled, with specific time allotted for each stop. Participants will hear from the industry's top consultants and specialists from the region. Farm Credit will provide water for the stops during the tour.

"We plan our field day to be like no other in the region," says Michael Chafin, who manages the Sunbelt Expo farm. "There is

really no other event where so many leading agricultural experts can be visited, or where our presenters can speak with farmers in such a convenient way.

"Hey, the field day is in July, and we know it can be tough to get away from the farm. We understand, because we have to get that same work done, too, on this farm. But we work to make the field day experience worth our guests' time and effort to be here."

BBQ LUNCH

The tours will end by noon. Ameris Bank will provide lunch for those who want a bite to eat before leaving or who wish to stay longer to talk with the sponsors and company representatives who will have booths where the shuttles unload passengers.

And there will be door prizes!

"Again this year, as has been the case for many years, we're focusing on our core agronomic crops for the field day," Chafin says. They are corn, cotton, soybeans, and peanuts, the backbone of most Southeast cropping farms.

University of Georgia researchers and Extension specialists conduct numerous trials at the Sunbelt farm for all major southern agronomic crops. UGA Cooperative Extension specialists for cotton, soybeans, and peanuts will be at the field day to talk strategies for better utilization of fertility, management of diseases and pests, and the best varieties to use when and where on a farm.

"Inputs — you have to have them, and they cost time and money to apply," Chafin says. "But you really can't afford to skimp on them, especially in our region, or disease, insects, weeds, or weather will eat you up."

In-the-field tours let you see firsthand how varieties and systems perform. Talk one-on-one with Southeast specialists and company reps.

"But what a grower can do — and what the experts who conduct research here have done — is to find ways to more precisely use and time inputs in order to make the highest quality yields ... and try not to go broke doing it."

Well-timed fungicide applications for corn and soybeans have proven to protect yields at the Expo farm, Chafin says, and specialists will be on hand to talk about what works best.

RESISTANCE CHALLENGES

Herbicide resistance continues to be a major focus for the region's cotton growers. UGA weed specialists company representatives will discuss management strategies for dealing with the situation today, plus offer a look at what's in the pipeline to help growers win the battle against hard-to-control weeds.

Monsanto will feature their DeKalb corn varieties. Pioneer will have popular corn varieties, often used by high-yield winners, on display. Syngenta will have their Norfolk King corn hybrids developed for the Southeast. Mycogen Seed will have corn and soybean varieties for inspection. And WinField will showcase its Croplan corn and soybean varieties bred for the Southeast.

Fertilizer tests are being conducted on

corn and most other crops being grown on the Expo farm. Maximizing plant nutrient use is always a top priority for growers who want the most from their variety choices.

TOP COTTON VARIETIES

The top-performing varieties, based on annual official variety tests across the Southeast, will be discussed by representatives from the various companies that provide cotton seed and technology in the Southeast.

Bayer, with FiberMax and Stoneville varieties, will show and discuss new Liberty technology.

The Expo Farm is a part of Monsanto/Deltapine's New Product Evaluator program, and the same varieties being grown by 200 or so farmers across the cotton belt will be shown during the field day.

Americot has developed new varieties that have performed well in OVT testing in the Southeast, and the company is making a push to increase market share in the region. Several of their new varieties will be on display at the field day.

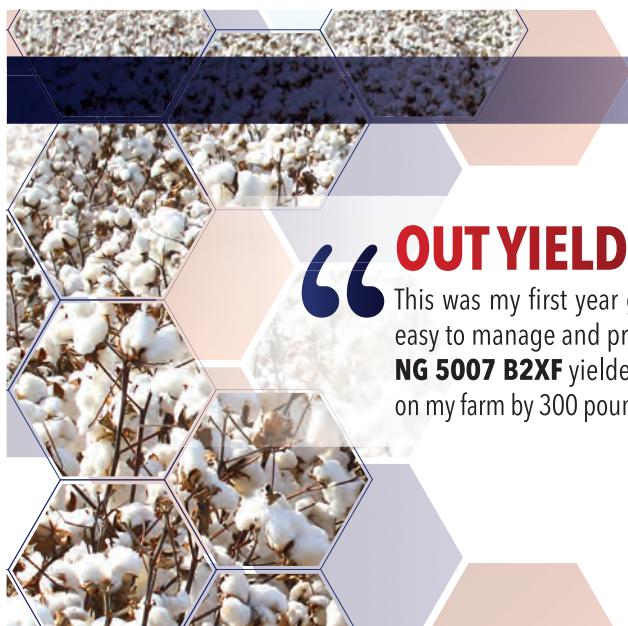

Dow's PhytoGen brand cotton has made a big push in the Southeast in recent years, and several of the PhytoGen varieties will be shown.

SOYBEAN TRIALS

The Expo farm has several large-plot soybean OVT variety trials each year. Chafin says Monsanto and their Asgrow brand soybean seeds will be planted, and company representatives will discuss soybean production in the Southeast.

Pioneer will have some of their soybean varieties in the test program at the Expo Farm. The company's Y series has shown promise in recent years for enhanced pest resistance and adaptability to a number of yield-limiting factors common in the Southeast.

DeWitt, an Arkansas-based company now with Bayer, will also have soybean varieties on the Expo farm.

888-678-SEED • www.americot.com

“ OUTYIELDING THE OTHER VARIETIES ”

This was my first year growing a **NexGen** cotton variety. **NG 5007 B2XF** was easy to manage and produced a very uniform stand with good square positions. **NG 5007 B2XF** yielded 1,414 pounds per acre, out yielding the other varieties on my farm by 300 pounds. I plan to double my acres of **NG 5007 B2XF** in 2016.”

CHARLES COLLINS
Mitchell County, Georgia

As of November 1st, 2015 no dicamba herbicide product has been approved for commercial in-crop use with Bollgard II® XtendFlex® Cotton. If a federal dicamba label is not imminent or has not been approved for commercial in-crop use by June 1st, 2016, the Bollgard II XtendFlex Cotton technology fee will be adjusted and republished to be the same as GenUity® Bollgard II® with Roundup Ready® Flex cotton.

DO NOT APPLY DICAMBA HERBICIDE IN-CROP TO BOLLGARD II XTENDFLEX COTTON IN 2016 unless a dicamba herbicide product is approved that is specifically labeled for that use in the location where you intend to make the application. Contact the U.S. EPA and your state pesticide regulatory agency with any questions about the approval status of dicamba herbicide products for in-crop use with Bollgard II XtendFlex Cotton.

IT IS A VIOLATION OF FEDERAL AND STATE LAW TO MAKE AN IN-CROP APPLICATION OF ANY DICAMBA HERBICIDE PRODUCT ON BOLLGARD II XTENDFLEX COTTON UNLESS THE PRODUCT LABELING SPECIFICALLY AUTHORIZES THAT USE.
ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. Bollgard II® XtendFlex® cotton and XtendFlex® cotton contain genes that confer tolerance to glyphosate, the active ingredient in Roundup® brand agricultural herbicides, dicamba, the active ingredient in M1691, and glufosinate, the active ingredient in Liberty® brand herbicides. Roundup® brand agricultural herbicides will kill crops that are not tolerant to glyphosate. dicamba will kill crops that are not tolerant to dicamba. Glufosinate will kill crops that are not tolerant to glufosinate. Contact your Monsanto dealer or refer to Monsanto's Technology Use Guide for recommended Roundup Ready® Xtend Crop System weed control programs. Bollgard II®, GenUity®, GenUity Icons, GenUity®, Respect the Refuge and Cotton Design®, Roundup Ready® and Roundup® are trademarks of Monsanto Technology LLC. LibertyLink® and the Water Droplet Design® is a registered trademark of Bayer. Americot® and NexGen® are registered trademarks of Americot, Inc.

Register to win one of our great prizes

Brown Rotary Mower 416

The Brown Rotary Mower 416, provided by Brown Manufacturing Company, Ozark, Ala., is perfect for heavy pasture clipping and stalk cutting. With its rugged design, it can cut heavy brush and trees up to 2 inches in diameter.

Trimble Navigation/Ag Technologies

A Trimble Monitor and Control system valued at \$2,500 will be given away. This give-away only includes the hardware. The installation and annual service are not included in this donation package.

Komet Irrigation Corporation

Komet Irrigation will be giving away a Komet Twin 101 Ultras 18 degree End Gun for a pivot valued at \$1201.

Titan/Goodyear Tires

Titan/Goodyear will be giving away a \$250 gift certificate.

Expo Field Day: See what's new and important for the Southeast

The Sunbelt Ag Expo summer field day is once again upon us. I know each and every one of you is, or has been, hard at work putting in this year's crops. I hope that all has gone well so far.

This year's field day will be much like the past few, but with several key differences. We want to extend an invitation to you, and anyone on your farm who may benefit from the speakers who will be presenting that day.

This year's tour will include the Southeast's leading ag companies and educational institutions, bringing you an unmatched set of presentations in an on-farm tour. The tour will provide you with the latest in agricultural technologies, products, and services.

We here on the Expo farm have expanded our UGA research plots to also include a very interesting watermelon irrigation study that may be of some value to some of our cucurbit growers. We have also been chosen to be this year's Colquitt County site for

the annual UGA County on-farm variety trial. We always hear the data presented at our production meetings, but now is your chance to see it up close and hear from the specialists on how these plots work.

As we approach an expected launch by several companies of new herbicide technologies and the awaited EPA de-regulation of these products, we want you to be able to hear from both the university researchers and the companies themselves about the timelines and product availability.

We know that with the present low commodity prices, every dollar counts. Please make plans to attend our annual Summer Field Day event July 14 — and bring a friend or neighbor!

Michael Chafin
Sunbelt Ag Expo Farm Manager

Wise fungicide use helps avoid resistance

By BRAD HAIRE
Farm Press Editorial Staff
brad.haire@penton.com

Farmers today have access to some of the best pesticide and fungicide products ever.

Consistent, quality yields depend on using them. And the continued viability of these products depends on everyone.

"Resistance to chemistries is something farmers are keenly aware of, and there is an ongoing effort to avoid or postpone its development," says Michael Chafin, farm manager for the Darrell Williams Research Farm at the Sunbelt Ag Expo.

"We know the cost of losing a product because of resistance. It can be devastating. And we don't know if, or when, we will get new chemistries to use on the farm — or with current regulatory scrutiny, if we will get to keep using products we have now."

Fungicide use is increasingly common in corn, soybeans, and even cotton in the Southeast. Most of the fungicides used belong to a few at-risk classes.

Fungicides such as azoxystrobin and tebuconazole are available as generic products, which can lead to reduced cost for growers, but can also lead to overuse and resistance, says Bob Kemerait, University of Georgia Extension plant pathologist.

"Our yield expectations are much greater than they were 16 years ago. We have new diseases in Georgia, and we have improved fungicides that better manage diseases and at lower use-rates.

"But, it's becoming difficult to bring new classes of fungicides to growers," Kemerait says. "And that's why the efficacy of fungicides in the strobilurin, triazole, SDHI, and benzimidazole classes has never been more critical."

RESISTANCE AVOIDANCE MEASURES

To minimize early development of fungicide resistance, he says:

- Always use at-risk fungicides in combination with chemically unrelated fungicides, which are preferably at low risk for resistance. This can be achieved by alternating applications of fungicides and by incorporating tank-mixes of unrelated fungicides. Insure that fungicides belong to unrelated classes by comparing the FRAC codes on the label.

- Restrict the number of fungicide applications and/or total amount applied per season, and apply fungicides only when necessary.

- Maintain the manufacturers' recommended application rates.

- Fungicides are most effective when

applied before infection has occurred.

- Use crop rotation and disease-resistant varieties to reduce the immediate need of fungicides.

- Maintain chemical diversity in a disease management program.

Herbicide resistance has become the most challenging problem facing agriculture in many parts of the country, especially in the South, where glyphosate-resistant Palmer amaranth was documented 10 years ago. Since then, farmers, industry, and Extension programs have been playing catch-up.

There has been no new herbicide chemistry developed in more than 20 years, and farmers should not expect any new chemistry, says Stanley Culpepper, UGA Extension weed specialist.

The current regulatory scrutiny and the hundreds of millions of dollars it would cost to bring a new chemistry to market makes the chances of any new chemistry virtually zero.

"It seems pretty smart to protect the herbicide chemistry we have today, by making wise decisions and implementing diversified herbicide modes of action into an integrated program that uses cover crops, tillage, and/or hand weeding," Culpepper says.

Forage crop research a key emphasis for Sunbelt Expo demonstration farm

By BRAD HAIRE

Farm Press Editorial Staff

brad.haire@penton.com

Forage acres are expanding in the Southeast, and more producers are interested in making higher quality hay. The Sunbelt Ag Expo farm is a premier location for forage crop research and demonstrations in the region.

Hay acreage is seeing "a considerable amount of growth," says Dennis Hancock, University of Georgia Extension forage specialist, who conducts forage research across Georgia and the region, and also for many years at the Sunbelt Ag Expo Darrell Williams Research Farm.

"We've had a number of acres that have gone into forage crops in the past couple of years," he says, "due to commodity prices being lower and cattle and dairy industries generally a little bit stronger, especially when compared to recent commodity prices."

"The forage-based livestock industry is a crucial part of the agricultural economy in the Southeast. In fact, forage crops are grown on more acres in the region than all other agronomic crops combined.

REALLY GOOD FORAGE

"Our friends at the Sunbelt Ag Expo have done an amazing job highlighting forage crops over the years," Hancock says. "Most notably, they have welcomed agribusinesses, scientists, and Extension personnel from all across the Southeast to conduct research, demonstration and Extension programs.

"We can grow really good forage in Southeast," says Michael Chafin, manager of the Sunbelt Expo farm, "and many producers do. But we are also learning, thanks to the work of Dr. Hancock and the many others who do work on the farm, what can be done to improve production in our area."

At the Expo farm, trials are conducted on a large scale for many varieties of bermudagrass, perennial peanuts, and alfalfa before they are promoted to the public.

Producers can see the forage research firsthand and hear the data and strategies for growing forage better at the Sunbelt Ag Expo Field Day and again during the Sunbelt Ag Expo main show Oct. 18-20.

PROMOTING NEW VARIETIES

"Expo has been especially instrumental in our efforts to promote new varieties of alfalfa that are adapted to the Deep South," Hancock says.

"Alfalfa demonstrations at the Expo began in 2005. In the years since, our experiences with interseeding alfalfa into bermudagrass at the Expo have been cited thousands of times as evidence that, yes, alfalfa will grow in the South!"

At the Expo farm, Hancock has researched and demonstrated a locally-produced, nitrogen fertilizer product from R.W. Griffin Industries. "We have conducted multiple years of research across Georgia, and have shown how their 18-0-3 19E blend is an economical liquid N

fertilizer, equal in every way to ammonium nitrate and superior to urea," Hancock says.

Work is getting started at the Expo Farm to establish what he calls a "variety garden," which will be used to showcase the advantages and disadvantages of six of the most-popular hybrids.

In the effort to learn more about weed control, bipolaris leaf spot, and stem maggot control in bermudagrass, Hancock says, numerous trials are conducted on herbicide, fungicide, and insecticide screens.

SOUTHEASTERN HAY CONTEST

He says the Southeastern Hay Contest, sponsored by Massey Ferguson, is one of the biggest Extension programs for hay in the region, and Expo is a vital partner in the effort.

"Since 2004, the Sunbelt Ag Expo has welcomed our team of forage scientists in our efforts to educate hay and baleage producers about forage quality through the hay contest.

"In addition to taking home bragging rights for having the best forage quality, contest participants have the opportunity to take home cash prizes or even a brand new disc mower or rotary rake from Massey Ferguson," Hancock says.

"Forage scientists and Extension personnel from across the Southeast have no better ally in their educational efforts than our friends at the Sunbelt Ag Expo.

"They have graciously hosted our Southeast Hay Convention, the Deep South Stocker Conference, the Georgia Grazing School, the Mid-Atlantic Dairy Grazing Conference, and numerous other events.

"They are great partners in our efforts to educate our farmers and growers about the latest forage management practices," Hancock says.

SPOTLIGHTING OUR SPONSORS

Your guide to the sponsors of the 2016 Sunbelt Ag Expo Field Day

AG TECHNOLOGIES, LLC/TRIMBLE

NAVIGATION is the official Sunbelt Ag Expo GPS provider. Trimble Navigation, a leader in GPS technology and precision agriculture, will be on site to demonstrate their latest technology, Irrigate-IQ™. Every field is variable. They each vary in topography, soils, rainfall, and many other factors. And because of this variability, not every area needs the same amount of water. Too much or too little water can affect the quality and quantity of your yield. Because every drop matters, every decision you make about irrigation is critical. With Irrigate-IQ™ variable rate irrigation, you can precisely apply the right amount of water, fertigation, or effluent in the right place — while minimizing runoff. Use Irrigate-IQ variable rate irrigation to control pivot irrigators, make irrigation plans, perform targeted application, and receive reports. By enhancing your irrigation operation, you can ensure you're doing what's best for your crop and your farm.

AGRI SUPPLY® started as a family owned group of farm stores back in 1962, based in Garner, just outside of Raleigh, N.C. Now, over 50 years later, Agri Supply has eight retail locations in North Carolina, South Carolina, Georgia, and Virginia. We release several unique catalogs per year, and we have a thriving website with a huge product selection available. The Agri Supply product line has grown by leaps and bounds — from what began as only farm items, to what now tops over 26,000 items and counting, featuring many categories. Whether it's for your farm, shop or home, Agri Supply has you covered!

AMERICOT — For Southeast cotton growers in 2016, Americot offers 4 Bollgard II XtendFlex cotton varieties. For the full season market, NG 5007 B2XF is late-maturing variety with excellent yield potential, excellent fiber package, high turnout, and is well-adapted to the southeastern cotton belt. For the early to medium market, Americot offers NG 3406 B2XF, NG 3405 B2XF, and NG 3522 B2XF. NG 3406 B2XF is a widely adapted, early-mid-maturing variety with excellent yield potential and fiber package. NG 3405 B2XF is an early-mid- to mid-maturing variety that has demonstrated excellent yield potential in the upper southeast including above the lakes in South Carolina and North Carolina. A new introduction for 2016, NG 3522 B2XF is an early-mid- to mid-maturing variety that has demonstrated excellent yield potential and fiber package across the Southeast. Americot provides Southeast, Mid-South, and Southwest cotton growers with high quality planting seed of NexGen and Americot brand varieties that offer excellent yield potential and excellent fiber package, with the technologies that growers want and need, backed by experienced turnrow service from planting to harvest. For more information, call Americot's Southeast sales representatives: Jim Pope (VA/NC) at (757) 650-8674; Gil Wiggins (NC/SC) at (843) 433-2526; Jeff Sandifer (East GA/SC) at (803) 300-2530; Michael Williams (South GA, FL) at (229) 454-4438; Adam Anderson (South GA, South AL) at (229) 921-0093; or Josh Gravitt (South GA) at (229) 313-2824. Detailed information can be found at www.americot.com

seed varieties that deliver the total package, with high yields, high quality fiber, and the latest trait technologies to help growers experience a new level of success. Varieties in the field day trial include two high yielding, full-season varieties, ST 6182GLT and experimental BX 1739GLT, and three early-to-mid-season varieties, ST 5115GLT, ST 4946GLB2 with excellence root-knot nematode resistance, and ST 4949GLT (new for 2016). ST 4949GLT, ST 5115GLT, and ST 6182GLT offer the newest Bayer germplasm in GlyTol LibertyLink TwinLink (GLT) varieties, with full tolerance to both Liberty and glyphosate herbicides, plus broad spectrum lepidopteran insect protection utilizing two Bt genes. Bayer trials will showcase Credenz soybean varieties from Group IV-Group VII with LibertyLink and Roundup Ready technology.

BROWN MANUFACTURING CORP. will showcase its Brown 418, the only single spindle 8-foot rotary cutter on the market. It boasts a 130 HP gearbox and is capable of cutting up to 2-inch diameter brush. The 418 comes standard with dual tail wheels; optional chain guards are available. The Brown Pull-Type Disc Harrow is back. It is available in 9, 11, 12-1/2, and 14 foot widths. These heavy duty harrows are standard with 22-inch notched disc blades. Options include 9"-9" or 9"-7" spacing; furrow fillers, balk breaker and blade scrapers.

CONGER LP GAS/PROPANE EDUCATION & RESEARCH COUNCIL — Conger LP Gas has been serving South Georgia since 1989. Conger LP Gas is locally owned and supplies propane in 28 counties in South Georgia, with over 6,000 customers. Conger LP Gas specializes in the agricultural industry as the only propane marketer in Georgia that is a distributor for propane irrigation engines. Bill Moore, Alternative Fuel Sales Manager, actively works with farmers in the area who are looking for ways to improve efficiency on the farm. Conger LP Gas also partners with the Propane Education and Research Council (PERC) to offer incentives up to \$5,000 to the farmer who purchases a propane irrigation engine. In partnership with the Sunbelt Ag Expo, Conger LP Gas and PERC have donated a 200 HP propane irrigation engine for testing purposes

BAYER CROPSCIENCE DIVISION will showcase several Stoneville cotton

against existing diesel and electric irrigation engines to compare efficiencies. Whether it involves grain, tobacco or peanut drying, propane irrigation engines, or chicken house and greenhouse heating, Conger LP Gas has the experience to sell and maintain every facet of propane on the farm. Conger LP Gas also works with farmers on vehicle and lawnmower conversions to propane. Our service techs have over 100 years of combined propane experience and can repair or replace any appliance from a 5,000 BTU bathroom heater to a 1,000,000 BTU grain dryer. As the only propane marketer in Georgia that carries a full line of propane irrigation engines, Conger LP Gas is able to analyze a farmer's current irrigation needs and determine if switching to propane is the most cost-efficient option. Our experience allows us to work with farmers in seeking propane solutions for the farm. This includes helping farmers apply for any rebates or grants that may be available when increasing energy efficiency on the farm.

CROP INTEL Is an independent data management company with locations in Cordele, Ga., and Samson, Ala. Why manage your farm data? Data management is key to the success of a precision ag program. Crop Intel consultants will assist you in the collection, storage, and analysis of data, enabling you to make better informed data-driven decisions to improve efficiency and profitability. At Crop Intel, we believe data is farmer-owned, and we treat it that way by keeping your information private on our secure server. Our consultants can assist you in maximizing yields and profits! Crop Intel overlays data layers such as soil fertility analyses, variable rate prescriptions, irrigation zones, soil type, texture, topography, imagery, yield, and sensor data to identify and manage within field variability. Let Crop Intel help you break away from the computer and get back in the field by speaking with one of our consultants today. Crop Intel created the variable rate lime and fertilizer prescriptions for the Sunbelt Expo demonstration fields. For additional information, please visit: www.cropintel.com

DELTAPINE/DEKALB/ASGROW
— DELTAPINE Brand Cotton: The Deltapine Class of 15-16 cotton varieties offer yield and fiber quality improvements over commercial standards. Each also contains Genuity Bollgard II with Roundup Ready Flex traits to help maximize performance on fields across the

Southeast. First launched in 2015 the Deltapine Xtend Varieties are setting standards in yield, quality and weed control in the Southeast. Take a look at the class of 15 and 16 Deltapine Xtend varieties — you will like what you see. **DEKALB Brand Corn:** Corn earworms may be small, but they can mean big problems for you and your operation. But thanks to DeKalb GenuityVTriple PRO corn, VT Double PRO and SmartStax, you're ready to fight back. You already know DeKalb germplasm gives you strong roots, stalks, great disease tolerance and yields — but now, combined with Genuity VT Triple PRO, VT Double PRO and SmartStax, DeKalb brand is a proven line of defense against corn earworms with the broadest spectrum of above and below ground insect protection. **ASGROW Brand Soybeans:** Asgrow continues to research new products and deliver new innovations — it will lead the way with the greatest volume of new Genuity Roundup Ready 2 Yield and Xtend varieties, the next generation of Monsanto soybean technology that will set the stage for improved performance. The 2016 Asgrow product line delivers a strong portfolio of maturity groups 4 through 7 that are tested and proven to perform well in both optimum and tough growing conditions.

DOW AGROSCIENCES/PHYTOGEN SEEDS/MYCOGEN SEEDS: PhytoGen Cottonseed varieties deliver outstanding seedling vigor, strong yields, and superior fiber quality. Growers at the 2016 Sunbelt Ag Expo Field Day in July and the Expo show in October will see several PhytoGen varieties and technologies, including our two newest stars, PHY 333 WRF and PHY 444 WRF. While the quality on the former is excellent, the latter sets new standards for upland cotton. In over 350 public sector and PhytoGen trials across the U.S., PHY 444 WRF delivers an average staple of 39.1, strength of 31.4 g/tex, with a mic of 3.98. We'll also showcase our next generation of herbicide resistance and insect management traits in PHY 490 W3FE. It includes the WideStrike 3 complement of Bt genes and introduces the Enlist Weed Control System, which brings full tolerance to 2,4-D, as well as glufosinate — traits that will prove invaluable in the battle against hard-to-control weeds such as Palmer amaranth. Several **Mycogen corn hybrids** that are well adapted to the south will be featured at the Expo Field Day. Included will be three hybrids with SmartStax multi-event technology: 13K77 (113 RM), a semi-flex ear hybrid that delivers top-end yields under

good management; 2C797 (113 RM), with high yield performance and good agronomics, makes it a good choice across the Southeast; and 2D848 (118 RM), which is a widely-adapted southern hybrid with good agronomics and stress tolerance to deliver high yields on your better acres. Included will be a Roundup Ready hybrid, 2Y744 (113RM), that is very high yielding and has solid agronomics and stress tolerance. Also included are two new experimental Mycogen hybrids, 12G36 and 13M87 with SmartStax multi-event technology. Several **Mycogen soybean varieties** will be featured: 5N479R2 (4.7 RM), which is broadly adapted across many soil types; SN501R2 (5.0 RM), a tall plant with excellent standability; and 5N550R2 (5.4 RM), a determinant variety, resistant to root-knot nematode, with good emergence, strong vigor, and a great defensive package to protect yield potential. Thank you for attending the Sunbelt Expo Field Day and please talk with our reps during your visit. Please ask them about our regional Diamond Showcase grower events to be held this summer.

DUPONT PIONEER — Pioneer® brand corn hybrids: P1197YHR, industry-leading yield potential in an early maturity, moderately statured offering. Offers above average northern corn leaf

Always the Innovator,
Never the Imitator®

For 70 years, NACHURS® has been helping farmers achieve higher yields and profits, offering premium in-furrow starters, foliar nutrition, and micronutrients.

bright and *Fusarium* ear rot resistance. An Optimum® Intrasect® hybrid with 20% refuge, excellent stalk strength, and outstanding staygreen suited for moderate- to high-yield irrigated environments. Also available, P1197R, P1197. P1319R Early to mid-maturity hybrid with stable yield potential, ideally suited for medium to good soils under dryland management or lighter irrigated soils. Also available P1319HR, P1319. P1529YHR mid-maturity hybrid offering exceptional drought tolerance, outstanding stalks, and above average roots. An Optimum® Intrasect® hybrid with 20% refuge, offering moderate northern and southern leaf blight resistance and moderate grain quality. P1637YHR mid-maturity hybrid with stable yield potential, excellent root strength, and leaf disease resistance. An Optimum® Intrasect® hybrid with 20% refuge, well-suited for both irrigated and dryland moderate yield environments. Also available P1637VYHR, P1637R. P1794VYHR full-season Optimum® Leptra® leader offers maximum yield potential that is suited for irrigated environments and brings strong early growth to the field. This tall-statured hybrid offers above average root strength and good northern leaf blight resistance. Optimum Leptra hybrid offers an expanded spectrum pyramid of insect protection with 20% reduced refuge. P1916YHR full-season, moderate stature leader with excellent stalk and strong root strength. Offers outstanding yield potential and heat tolerance coupled with favorable stress emergence. Optimum® Intrasect® hybrid with 20% refuge offers outstanding staygreen and favorable grain quality. Position under irrigated environments and moderate dryland situations. **Pioneer® brand soybean varieties:** P46T59R: New mid-Group IV indeterminate variety offering excellent root-knot nematode resistance with excellent harvest standability and tawny pubescence. Suited for high yield management in sandy fields with known root-knot infestations. P54T94R mid-Group V leader variety offering excellent root-knot nematode resistance and good agronomic trait package with tawny pubescence. Stable yield potential coupled with excellent harvest standability to position in full-season productive dryland situations. P56T12SR, a new variety introduction with STS® gene in mid-maturity Group V. Excellent root knot nematode resistance and above average frogeye tolerance are key strengths of this variety. Suitable for double-crop situations. 95Y70 (R/STS), an established workhorse variety with STS® gene in late maturity Group V. Top double-crop leader

choice with drought tolerance and resistance to southern root-knot nematode. Well-suited for ultra-late South Georgia planting production situations. P76T54R 2 mid-Group VII variety introduction with tawny pubescence containing the Genuity® Roundup Ready 2 Yield® trait. Excellent root knot nematode resistance, above average charcoal rot resistance and very good standability provide versatility to this bean. Also, exhibits moderate iron chlorosis tolerance. Suitable for full-season or double-crop situations. **Pioneer® brand sorghum hybrid:** 83P17, a high yield potential option with above average standability offering good anthracnose resistance for later planting situations.

FARM CREDIT ASSOCIATIONS OF GEORGIA have been helping Georgia grow for generations. Celebrating 100 years, Farm Credit supports rural communities and agriculture with reliable, consistent credit and financial services today and tomorrow. As a member-owned cooperative, our members have been paid over \$750,000,000 in patronage refunds since 1988. It's a tradition of being the only lender who pays you for doing business with us. For more information, contact us at georgiafarmcredit.com

FLINT RIVER PARTNERSHIP/CERTIFIED AG RESOURCES, INC. will showcase remote soil moisture monitoring. This moisture sensing technology is currently deployed on working farms throughout Southwest Georgia and is available across Georgia through the USDA NRCS Environmental Quality Incentives Program (EQIP). The demonstration of these technologies at Sunbelt this year are again made possible in part through funding support from The Coca-Cola Company, Flint River Soil and Water Conservation District, and The Nature Conservancy. The moisture sensors are cutting edge technology used to improve the efficiency of irrigation water use. Remote soil moisture monitoring (RSMM) improves efficiency by identifying precise periods of time in which a farmer can irrigate less by using objective field data such as soil moisture, soil temperature, crop growth stage and localized ET.

GEORGIA SOIL & WATER CONSERVATION COMMISSION will highlight its Agriculture Water Conservation Program during Field Day, in support of Georgia's 40 Soil and Water Conservation Districts that assist landown-

ers in developing their soil and water resources. The field presentation will focus on our Ag Water Meter program that includes installation, inspection, and maintenance of meters installed on agricultural irrigation systems in Georgia. GSWCC also collects data from these meters that assists policymakers in better understanding agricultural water use in the state and helps farmers improve the efficiency of their water resources. In addition, GSWCC will describe how our Mobile Irrigation Lab helps farmers' irrigation systems apply water more effectively. GSWCC website is <http://gaswcc.georgia.gov>

KELLEY MANUFACTURING CO. has been building dependable equipment for progressive farming for over 45 years. Every piece of KMC equipment is developed and engineered with the farmer's needs in mind, insuring a top quality implement that will produce top quality results. Specializing in peanut harvesting, tillage and poultry cleanout equipment, KMC offers a wide variety of products to their customers. Be sure to visit KMC's booth at the Expo Field Day to learn more about the products they offer. For more information about KMC and its entire product line, please visit www.kelleymfg.com or call 1-800-444-5449.

KOMET — Komet is a family business. We inherited the values that are the foundation of our relationships from the company's founder, Roland Drechsel, our father. For us, the order of the day is honesty, respect, and trust. We believe that in today's world, rather than inventing new promises, it is far more important to respect, uphold, and build on the customer promises on which our company was founded. In addition to providing the highest quality irrigation equipment, we want to make sure our customers have water application products that operate at the highest levels of efficiency and effectiveness, which in

2016 Sunbelt Expo
October 18-20

turn will help to limit the waste of our natural resources. We believe in building long-lasting relationships with our customers. This gives us the opportunity to understand their needs, analyze how our products are meeting those needs, and to continue to improve. We believe in what we do, and are passionate about how we do it.

NACHURS® — Since 1946 NACHURS® has led the fertilizer industry by offering agriculture's most productive and successful producers the highest quality, scientifically based, and agronomically sound fertilizer technologies in the business. NACHURS® technology products continue to lead the industry and provide commonsense solutions for farmers by incorporating science-based fertilizers to enhance nutrient use efficiency. These proven technologies will help maximize crop production potential and overall farm profit. **Bio-K®** is the most effective, lowest salt, least corrosive, most soluble, and most plant-available potassium source in the industry. **Rhyzo-Link®** is a fertilizer combined with 8 unique strains of plant growth-promoting rhizobacteria which link soil health/chemistry and plant productivity through efficient balance, placement, and recovery of soil/plant nutrients. **YaraVita® Procoate®** provides a unique way to coat micronutrients onto dry fertilizer to provide maximum efficiency and nutrient distribution across the field, which greatly improves plant uptake compared to alternative methods of spreading dry micronutrients. **Aqua-Tech®** fertilizers are designed to be injected through irrigation systems. The exclusive technology of Aqua-Tech® solves the problem of hard water tie-up with phosphorus. This product line boasts the ultimate in nutrient availability, ease of use, and safety (handling and equipment) for most irrigation water, including drip irrigation systems. Maximum efficiency is achieved when combining high efficiency fertilizer with sound soil fertility management. Use NACHURS® beginning with in-furrow fertility for all crops; add the finishing touches with NACHURS® foliar-applied nutrition, micronutrients, and other unique technologies. The quality of the ingredients used to manufacture NACHURS® liquid fertilizers is second to none. Virgin raw materials are selected for maximum nutrient availability, solubility, and ease in handling, storage, and application.

NEWTON CROUCH, INC. provided the variable rate spreader equipment used

to prepare the fields for the demonstration. Visit NCI at the Sunbelt Field Day to learn how you can leverage the precision ag equipment for your farm's needs. NCI is celebrating 76 years in business this year. A family-owned business based in Griffin, Ga., NCI has been a part of the Southeast agriculture community since its inception. NCI manufactures an extensive line of dry fertilizer and lime spreaders as well as liquid fertilizer applicators, sprayers and nurse trailers. We specialize in precision ag equipment such as variable rate dry spreaders and GPS guidance systems. Learn how our variable rate technology can improve yields and limit waste, all designed to help promote more efficient farming practices. The NCI equipment line is noted for its high quality components and design allowing for rugged durability. NCI equipment has a long field life, living up to its motto of "The Spreader of Choice."® The NCI parts department is always ready to help with your pump, parts, tips, and poly tank needs. Newton Crouch has three locations to serve your needs: Griffin, Ga. (800) 241-1350; Albany, Ga. (800) 624-7931; and Sebring, Fla. (877) 605-0273. Visit newtoncrouch.com to learn why Newton Crouch is the Official Spreader of the Sunbelt Expo.

REINKE MANUFACTURING COMPANY, INC. is the world's largest privately held manufacturer of center pivot and lateral move irrigation systems. Family owned since 1954 and headquartered in Deshler, Neb., Reinke develops products designed to increase agriculture production while providing labor savings and environmental efficiencies. Reinke is a continuing leader in industry advancements as the first to incorporate GPS, satellite-based communications and touchscreen panel capabilities into mechanized irrigation system management. For more information on Reinke or to locate a dealership, visit www.reinke.com or call 402-365-7251.

R.W. GRIFFIN FEED, SEED & FERTILIZER, INC. — The flagship company for R.W. Griffin, a fifth generation Southern agribusiness company leading the way through innovative crop solutions, a team of Certified Crop Advisers, retail farm supply centers, cotton gins, peanut buying points, major terminals, and a large wholesale distribution network. In 2014, R.W. Griffin Industries, LLC, one of the R.W. Griffin Feed, Seed & Fertilizer, Inc., companies, joined forces with the UGA Cotton, Corn and Forage Teams by agreeing to provide nitrogen inputs for

both the test plots and production farm at Sunbelt Expo. R.W. Griffin Industries, LLC, is proud to have supported UGA research efforts on cotton and forage for the past several years. Products supplied will include 19-E, "The Low Cost Solution," which is a liquid nitrogen input used by growers for more than 40 years. In addition, they will supply 18-0-0-3S, a 19-E based sulphur solution, and Calcium Ammonium Nitrate in dry form, both popular choices among growers. R.W. Griffin Industries, LLC, continues its commitment to supplying products that are based on agronomically sound principles, have stood the test of time, and are the best value for its customers. For more information, please contact Rudy Hancock at rudy.hancock@rwgriffin.com or visit us at www.rwgriffin.com or www.19-e.us

S&S MARKETING/MONOSEM — The versatility of the Monosem vacuum meter is demonstrated in its ability to consistently meter many different seed types. This Multi-Crop option provides adaptability to market trends that more specialized single crop planters don't allow. A Monosem owner can plant row crops such as corn, soybeans, milo, and cotton with accurate precision and then also use the same planter for specialty crops such as sugarbeets, peanuts, sweet corn, edible beans, etc. All Mono-sem planters are custom built-to-order to the specifications of each operation, for tillage style, inputs, row spacing and row types including single, twin-row, and ultra-narrow row.

SOUTHERN STATES COOPERATIVE — Southeastern USA adapted soybean varieties from Southern States Cooperative. Farmer Owned Since 1923. **SS 5916X** New. 5.9 relative maturity variety with Monsanto's X-Tend technology. **SS 6315 R2** New. 6.3 relative maturity variety medium plant height and tawny pubescence. **SS 6713N R2** A true Southerner. 6.7 maturity. Resistance to Southern Root Knot nematodes and moderate resistance to Peanut Root Knot nematodes. **SS 6917 X** New. 6.9 relative maturity variety with Monsanto's X-Tend technology. **SS 7215NS R2** New. 7.2 relative maturity STS variety. Strong disease and nematode package including moderate resistance to target spot. **SS 7516 X** New. 7.5 relative maturity variety with Monsanto's X-Tend technology.

TITAN/GOODYEAR FARM TIRES — American made and owned, Titan Tire

Corporation is proud of the hard-working American citizens who produce the best tires and wheels for our country every day. Titan and Goodyear Farm Tires have the largest selections of quality products in the industry, with the greatest servicing dealer network. Stop by the Titan/Goodyear booth and remember: Buy American!

UGA COTTON TEAM is exploring various production issues at the Sunbelt Expo. In 2016 the Cotton Team will conduct experiments across several disciplines. Soil Fertility: field experiments will investigate nitrogen and potassium fertilization programs. The Sunbelt Expo has been chosen to be this year's Colquitt County site for the annual UGA County on-farm variety trial.

UGA FORAGE SPECIALIST — This demonstration site will highlight UGA and USDA-ARS research with forage bermudagrass, including the new "bermudagrass variety garden," which will illustrate the advantages and disadvantages of six of the most popular hybrids. Also at this site, a brief summary of the bermudagrass stem maggot research will be presented, including a discussion of varietal differences in BSM tolerance and insect control options. We also will share the results of our research on a locally produced, liquid nitrogen fertilizer product from R.W. Griffin Industries, LLC, which has proven that their 18-0-0-3 19E blend is an economical and effective N source.

UGA PEANUT TEAM is conducting a trial at the Sunbelt Expo's Darrell Williams Research Farm to determine effectiveness of a plant growth regulator (Apogee) on the current peanut cultivars commercially available. Research since the mid 2000's has shown that Apogee can effectively reduce fine growth and increase yield in Virginia-Type peanut cultivars. However, responses in runner-type peanuts have not been as positive, especially in slow growing runner cultivars. In these cultivars, vine growth was slowed but at the cost of some yield

potential. Over the past few years, many new runner-type peanut cultivars have been released that have increased vine growth causing a renewed interest for evaluating Apogee again. Therefore, the Cultivar trial in 2016 is evaluating the response of ten cultivars in single-row pattern to applications of Apogee. In a hope to lessen the negative impact on yield a reduced rate of Apogee is being evaluated. The cultivars are: Georgia-06G, Georgia-09B, Georgia-12Y, Georgia-13M, Georgia-14N, Georgia-07W, FloRun '107; FloRun '157, TUFRunner '297; and TUFRunner '511. The "Cultivar by Apogee Trial" is set up in a split plot design, with the main plot as Apogee treatment, and the sub-plot as Cultivar. Each plot is two rows (6 feet wide) by approximately 400 feet long and there are three replications of each treatment (Apogee treatment by cultivar). The trial was planted on May 6. Data to be collected will be plant growth, yield, grade, TSWV, and other disease ratings.

UGA WEED SCIENCE demonstration sites will showcase cotton cultivars with tolerance to 2,4-D or dicamba that are nearing commercialization. Efforts are under way to define the most effective weed management systems, while better understanding the potential for off-target movement of these herbicides. Additional efforts include using cover crops such as rye and crimson clover to improve weed management and cotton production.

VALMONT IRRIGATION/VALLEY —

"Doing more with less" is a basic theme of the farming community these days. At Valley, we understand this need in today's agricultural landscape. Since 1954, Valley has brought its mechanized irrigation products to the world's farmers through our superior dealer network. Valley dealers have gained the trust as the market leaders in their respective territories. Any manufacturer that does not exhibit this trait from their distribution cannot sustain market leadership. As growers have less labor on the farm, they are relying on their suppliers for more day to day support of the products and services they purchase for their operation. Valley dealers bring that support to the farm. All ag dealers must maintain a well trained workforce to keep up with the technology that is emerging every day for the farm. Valley dealers annually attend our superior service schools held throughout the country as well as Valley University, our on-line training academy for Valley dealers and Valley Irrigation personnel.

Among the products and services that will be highlighted this year at our tour stop will be AgSense, remote telemetry products for pivots and pumps, Valley Water Management, our in house division for supplying pumps, panels, VFD's, etc., to the customer through our dealer network, a discussion of water quality changes affecting pivot pipeline choice, sprinkler considerations, and maintenance programs. On display will be our new Revolution Airless Tire, in addition to other products of interest to farmers.

WINFIELD — A Land O'Lakes company offers top-performing seed and crop protection products. With unmatched agricultural expertise and performance as core company values, WinField Solutions brands match leading seed and crop protection products to help growers, dealers and other industry partners achieve the highest level of success. Backed with unrivaled technical services and knowledge, WinField Solutions products deliver outstanding solutions and value for the agricultural industry. AnswerPlot.com is the online arm of the WinField Solutions Answer Plot program, through which growers in 33 states can see data on Croplan Genetics seeds, DeKalb products, Asgrow, NK and Mycogen, while gaining insights on macro and micronutrients, seed treatments, crop protection and seed population strategies. Each of the more than 180 Answer Plot sites covers 15 to 20 acres and serves as a local crop research center for area growers.

WALB-NEWS 10 — For over 60 years WALB has prided ourselves on being the one the people in South Georgia have turned to for up-to-date information in news and weather. Weather affects everyone, but none greater than our farmers. Each morning we start your day with over 2 hours of weather coverage on both our NBC and ABC affiliates. Also, during this time period we offer up-to-the-minute soil temps, as well as commodities and livestock pricing.

VERDESIAN LIFE SCIENCES is a plant health and nutrition company that helps farmers maximize their nitrogen and phosphorus investments. Our patented biological, nutritional, seed treatment, and inoculant technologies lead the charge to maximize yields and stay ahead of the growing demand for food and fiber.

CCA/CEU CREDITS

All certified crop advisors attending Sunbelt Ag Expo Field Day will have an opportunity to register to receive CCA/CEU Credits.

Sign-up sheets will be available at registration.

When explaining higher peanut yields, a pie chart didn't seem right.

Realize what a DuPont™ Fontelis® fungicide program can do for you.

Studies have demonstrated that growers can produce up to 382 lbs. more peanuts per acre when using Fontelis®. It delivers fast-acting, long-lasting protection from diseases, with both preventative and curative action. No matter what challenges come your way, talk to your DuPont representative and retailer about what Fontelis® can do for your peanuts. fontelispeanut.dupont.com

TruChoice™ Get the most out of every acre through the TruChoice® Advantage and TruChoice® Financing programs.
